

MY DIGITAL SHARES? **ALWAYS AT MY FINGERTIPS!**

With Aequitec, you can now manage your shares completely digitally. The shares are displayed both in the Aequitec smartphone application and in the shareholders' securities accounts at their banks. Aequitec complies with Swiss law and stores all data completely within Switzerland.

The advantages of digital shares:

1. Improved shareholder dialogue due to unambiguous chain of title
2. Opening up new shareholder groups through the possibility of booking non-listed shares in all standard securities accounts
3. Highly efficient handling of the relevant compliance and governance processes
4. Completely electronic - in just one smartphone application

These are the changes compared to previous share registers:

Ownership records are no longer kept on paper or in Excel spreadsheets, but in a professional software application operated in Swiss data centres according to state-of-the-art security standards. This ensures that the ownership of the shareholders can be established beyond doubt at any time.

Our service for you:

- Preliminary check of your existing share register
- Transfer of your share register into a modern software application
- Support with regulatory requirements, e.g. KYC
- Legal advice on detailed questions from partner law firms
- Optional introduction of intermediated securities for the entry of your non-listed registered shares in the securities accounts of the respective shareholder
